Vision — Dashcomigo

Who We Are

Dashcomigo is a financial management SaaS platform built specifically for Brazilian MEIs (Microempreendedores Individuais) and small business owners — the 15 million+ entrepreneurs who run their businesses without a CFO, an accountant on speed dial, or a dashboard that actually makes sense.

We are building the financial operating system for the Brazilian self-employed economy.

The Problem

Over **60% of small businesses in Brazil fail within the first five years** — and the leading cause is not lack of customers, but lack of financial visibility.

Brazilian MEIs and small business owners face a common set of problems:

- **No real-time view** of cash position, receivables, or payables
- **Financial data scattered** across multiple bank accounts, spreadsheets, and apps
- **No separation** between personal and business finances
- **Zero insight** into whether their business is actually profitable
- **No access** to the financial intelligence tools that large companies take for granted

Existing solutions are either too complex (enterprise accounting software), too generic (Excel), or too disconnected from where money actually moves (bank apps).

Our Mission

Empower every Brazilian entrepreneur with the financial clarity they need to make better decisions — every day.

Dashcomigo democratizes financial intelligence. We take the tools that only large corporations could afford — real-time dashboards, predictive analytics, investment tracking, Open Finance integration — and make them available to the smallest unit of the Brazilian economy: the solo entrepreneur.

Our Vision

To become the financial backbone of the Brazilian MEI ecosystem — the single platform where entrepreneurs understand, control, and grow their money.

In five years, Dashcomigo will be the platform that:

- Automatically imports every transaction from every bank account via Open Finance
- Predicts cash flow problems before they happen
- Surfaces actionable insights ("You could invest R\$800 this month based on your cash position")
- Connects entrepreneurs to financial products tailored to their profile (credit, insurance, investments)
- Replaces the need for a basic accountant for day-to-day financial management

Core Values

Value	What It Means
Clarity	Financial data should be simple, not intimidating
Trust	We handle sensitive financial data with the highest standards of security
Empowerment	Every feature should help the entrepreneur make a better decision
Access	Premium financial tools should not be exclusive to large companies
Brazil-first	Built for the Brazilian regulatory environment, culture, and entrepreneur reality

The Opportunity

Brazil has:

- **15+ million active MEIs** (SEBRAE, 2024)
- **Open Finance fully operational** since 2023, with 40M+ consents shared
- A growing **fintech ecosystem** that is reshaping how Brazilians interact with money
- A **massive underserved market** of small business owners with no adequate financial management tool

Dashcomigo sits at the intersection of **financial management**, **Open Finance data**, and **AI-driven insights** — a combination no competitor has fully delivered for this audience.
